

Understanding the Different Types of Home Care

Care Compass
by Caresify Home Care

Home Care Beyond Assumptions

At Caresify, we believe home care isn't just for seniors or those facing serious health issues-it's for anyone who wishes to live independently with dignity and support. Whether you're a young adult managing a chronic condition, recovering from a procedure, or an aging adult seeking daily help, our services are built to meet you where you are.

Caresify's Circle of Care™ brings together medical, non-medical, and transitional support to help you thrive at home.

Non-Medical Home Care

Ideal for individuals who are homebound, living with disabilities, or simply need support with daily routines, non-medical home care offers peace of mind and a better quality of life.

At Caresify, we go beyond standard services by integrating our signature programs such as CARE Activ™ and SAFE Steps™ into your care plan.

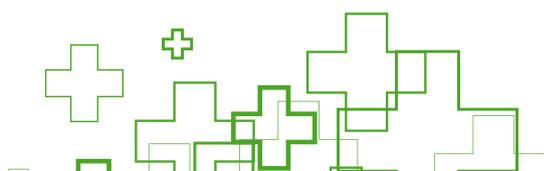

UNDERSTANDING THE DIFFERENT TYPES OF HOME CARE

Services typically include:

- Personal care: bathing, dressing, grooming, and toileting
- Homemaking: light cleaning, laundry, cooking, shopping, and errands
- Companion care: emotional support, conversation, games, light exercises
- Reminders for medication and appointments

Caresify's holistic approach also includes wellness check-ins and integration with our Caresify360™ technology, connecting families and care teams in real-time.

Home Health Care

Designed for those returning home after hospitalization or managing complex medical conditions, home health care bridges the gap between clinical recovery and home life. It requires a physician's prescription and is typically covered by Medicare or insurance.

Services may include:

- Skilled nursing
- Physical, occupational, or speech therapy
- Medication management and injections
- Wound care and vitals monitoring

Caresify coordinates with licensed medical professionals to ensure seamless recovery while also offering the CAP – **Caresify AfterCare Program™**, a 30-day transitional bundle aimed at reducing hospital readmissions.

Private Duty Nursing

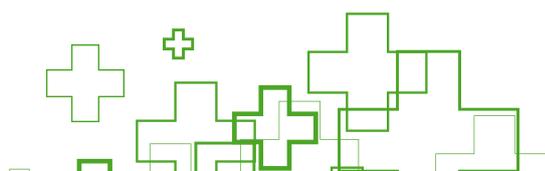

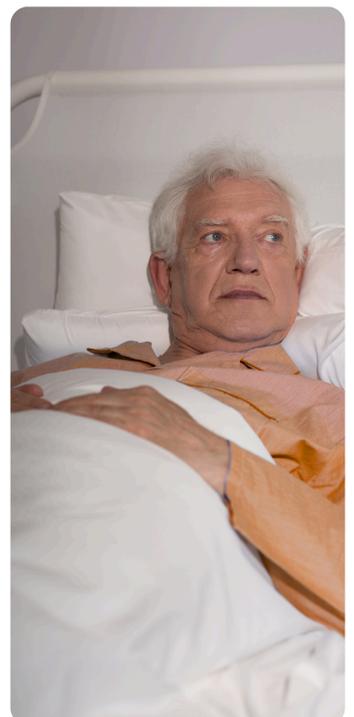

For individuals with chronic or complex conditions, private duty nursing offers continuous in-home medical care administered by RNs or LPNs. It is especially beneficial for those requiring help with medical devices, medication administration, and advanced health monitoring.

Caresify's private duty care may include:

- Tube feeding and catheter care
- Post-surgical recovery and rehab support
- In-home medication administration & coordination
- 24/7 skilled supervision for high-risk individuals

Our nurses also educate family members, helping them gain confidence in providing supportive care. Through **Post-Diagnosis Care**, we support families navigating new diagnoses like cancer, Parkinson's, or terminal illness.

Navigating the Circle of Care™ with Caresify

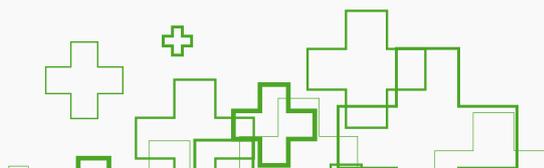

Choosing home care doesn't need to be overwhelming. At Caresify, our **Care Compass™** guides families through every step, helping you understand your options and build a personalized care plan.

From companionship to 24/7 skilled care, Caresify aligns every program—CDSP™, SAFE Steps™, CARE Activ™, and more—with your unique needs to deliver compassionate, coordinated and continuous support.
